

Alekhya Chowdary Velicheti

Email:alekhyavelicheti99@gmail.com

Ph: +1 (470) 850 4577

PROFESSIONAL SUMMARY:

- Over 2+ years of experience in Information Technology industry in various roles with excellent experience in Software Integration, Linux Administration, Configuration, Production support, in-depth knowledge of Cloud Computing strategies & expertise in the areas of Build and Release management, CI/CD Pipelining, DevOps Engineer Build & Release Management, Cloud Services like AWS, Microsoft Azure.
- Knowledge on Google Cloud Platform (GCP) for developers to build, host, store and deploy applications on Google's highly scalable, reliable infrastructure for web, mobile and backend solutions.
- Experienced in working Google Cloud Platform (GCP) services like IAM & Admin, App Engine, Compute engine, GKE, Cloud Functions, Cloud Storage, SQL, VPC Network, Network Services, Network Security, Monitoring, logging, cloud build, ECR, pub/sub, Big Query, Stack driver Etc.,
- Experienced in designing AWS and Azure cloud models for Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS) and Software-as-a-Service (SaaS).
- Proficient in strategy and practical implementation of AWS cloud-specific services which include EC2, S3, EBS, EFS, VPC, ELB, EMR, ECS, IAM, Cloud Trail, Cloud Front, Cloud Formation, Elastic ache, Cloud Watch, RedShift, Lambda, SES, SQS, SNS, RDS, Dynamo DB and managing security groups on AWS.
- Worked on various Azure services like Compute (Web Roles, Worker Roles), Azure Websites, Caching, SQL Azure, NoSQL, Storage, Network services, Azure Active Directory, API Management, Scheduling, Auto Scaling, and PowerShell Automation.
- Involved heavily in setting up the CI/CD pipeline using Jenkins, Maven, Nexus, Git, GitHub, Ansible, Terraform and AWS.
- Extensively worked on Jenkins by installing, configuring, and maintaining for continuous integration (CI) and for End-to-End automation for all build and deployments.
- Experience in building sophisticated and highly automated infrastructure using automation frameworks such as CloudFormation, Terraform.
- Implemented a Continuous Delivery pipeline with Jenkins, Git, and Ansible to build an Amazon Machine Image (AMI) from the latest version of Amazon Linux.
- Worked on several Docker components like Docker Engine, Hub, Machine, Docker images, compose, Docker registry and handled multiple images primarily for middleware installations and domain configurations. Used Docker containerization to make our application platform to be consistent and flexible even when they are shifted in multiple environments.
- Utilized Kubernetes and Docker for the runtime environment for the CI/CD system to build, test, and deploy.
- Experience creating pods and clusters in Kubernetes.
- Experience in branching, tagging, and maintaining the version across the environments working on Software Configuration Management (SCM) tools like Subversion (SVN) and git.

Certifications:

TECHNICAL SKILLS:

Operating Systems	Linux, Ubuntu, Windows.
Programming/scripting Languages	C, HTML, CSS, Python.
Version Control Tools	GIT Hub, GitLab, AWS Code Commit
Build Tools	-
GCP	Compute Engine, Cloud Storage, Cloud SQL, Google Kubernetes Engine, Cloud DNS
AWS	ServicesEC2, S3, EBS, VPC, ELB, AMI, SNS, RDS, IAM Cloud formation, Terraform, Security Groups, DynamoDB, Lambda, cloud patch management
AZURE	Azure Cosmos DB, Azure MySQL, AKS Schedule, Load Balancer, Azure Pipelines, Azure SQL Database (PaaS), Azure DevOps m
Virtualization Tools	VMware vSphere, Oracle Virtual Box
Configuration management Tools	Puppet, Ansible.
Containerization tool	Docker
Cloud infrastructure	AWS, Azure, GCP
Project management tools	Jira
Logging/Monitoring Tools	Cloud watch, Cloud trail

EDUCATION:

Concordia University, Gina Cody School of Engineering
Master of Engineering in Information System Security

Montreal, Quebec
May 2022 - April 2024

GITAM University, GITAM School of Technology
Bachelor of Science in Computer Science

Hyderabad, India
June 2017 -June 2021

PROFESSIONAL EXPERIENCE:

Accenture Solutions Pvt Ltd – Hyderabad, India

May 2017 – Dec 2018

Position: DevOps Engineer

Responsibilities:

- Creating Kubernetes (GKE) Clusters with multiple Node pools using terraform in DEV, UAT and PROD Projects and also automating adding new node pools whenever needed.
- Automating Creation of GCP Resources like Compute Engine Instances, Service Accounts, SQL Instances, Storage Buckets, Big Query datasets, Dataflow jobs, Pub/Subtopics, Monitoring Dashboards, Service SLO's, log-based alerts etc., using terraform (infrastructure as a code).
- Creating Continuous Integration (CI) and Continuous Deployment (CD) Pipelines in Jenkins using the Tools like Git, Bit Bucket, Maven, Junit, Fortify, Cucumber, SonarQube, Nexus, Docker, GCR, Helm, Ansible, Kubernetes.
- Creating Freestyle, Maven project, Pipelines, Multi branch pipelines etc., in Jenkins using pipeline as a code. And also Creating Credentials and Config Files and integrating Jenkins with SCM repositories
- Installation of Istio service mesh using istioctl and implementing istio service mesh to our microservices and data sources for secure communication and extra monitoring Telemetry including virtual service and istio-ingress gateway, service entry. Also labeling the namespace for automatic Istio sidecar injection on all clusters in the service mesh and making sure there is an istio-proxy/sidecar container running in every pod for Applications.
- Creating Service Accounts for each application and assigning required roles to those Service Accounts using terraform in IAM.
- Worked on installation, administration, and configuration of ELK stack, AppDynamics on GCP and performed Log Analysis. Creating customized Dashboards exposing them like Grafana, Prometheus.
- Setting up of istio Ingress controller, istio ilb gateways, Kube-Proxy, Ngnix-ingress as load balancer, etc.
- Actively worked on Migrating all repositories from bitbucket to GitHub.
- Working on Migrating All resources from AWS cloud to GCP Cloud. Also, Extensively Working on migrating customers from AWS to GCP.
- Collaborating with architects and application engineers to ensure applications are maintainable, scalable, and follow appropriate disaster recovery and high availability strategies.
- Working on weekly releases in UAT and Prod in GCP Including creation of change request in Service now and getting approvals and deploying applications and making sure Apps are up and running.
- Working on observing real-time metrics in the pipeline and deployment strategies – Blue/Green, Canary Deployment
- Monitoring all Kubernetes clusters, micro service-based applications seamlessly using Stack driver, Prometheus, Alert Manager, Grafana, AppDynamics, Apica Checks, pagerduty, Elk Stack (Elasticsearch, Logstash, Kibana) and providing the solutions by debugging, troubleshooting, lucene Querying, collecting metrics, root cause analysis etc., to maintain zero down time for applications.

Environments: AWS, EC2, EBS, ELB, AMI, Splunk, auto scaling, GCP Services, S3, Route53, SNS, Ubuntu, RHEL, Windows, Unix, Shell/Groovy Scripts, GIT, Docker, ANSIBLE, Azure Kubernetes Service, Google Kubernetes, EKS, Engine python, Splunk, Jira, GIT hub, Jenkins
